Deliverable abstract

The Change Management Register for the DINOSAR project is a crucial document designed to ensure effective communication and management of changes throughout the project lifecycle. This register is essential for documenting and addressing both planned and unplanned changes, thereby maintaining the project's trajectory and mitigating potential risks. Changes may include alterations in staff, budget adjustments, modifications to deliverables, deadlines, and other variations that could impact the project positively or negatively. The Change Management Register facilitates the tracking and management of changes to the project scope, timelines, resources, and other critical aspects.
