dinosar

Diagnostic tool that INtegrates Optical, infrared and SAR data

D3.4. Report on the empirical physical and observational model and its performance

Version 2. Intermediate description and assessment report on the initial version of the SAR and NIR/optical empirical physical and observational model.

Authors – Juan Manuel López, Dirk Hoekman, Antonia Skarli, Henk Pelgrum

Institutions: Universidad de Alicante, SarForest, eLEAF

Deliverable abstract

This document is the report with the results of the second year of activities of WP3. This report contains an updated version of the description of the empirical physical (forward and inverse) models for NIR/optical and radar data, employed separately to produce estimates of biomass at every date and accumulated biomass during each cultivation season.
